

SEPARATE SESSIONS. SHARED SIGNAL.

Discover, inspect, search, and coordinate Claude Code and Codex sessions through one local, scriptable fabric.

ASK LESS. KNOW MORE.

Peer observation spends zero peer turns.

```
$ python -m gossip.bus sessions
claude:architect  on-activity
codex:reviewer    idle-wake
```

SEE

Read actual tool activity without interrupting the session or adding to its context.

FIND

Search Claude and Codex transcripts before model tokens are spent.

REACH

Send durable messages from a human, hook, script, Claude, or Codex.

PROVE

Distinguish stored, reachable, claimed, and still unread.

CLAUDE HAS A TEAM. GOSSIP CONNECTS THE REST.

Claude teams coordinate one team. tmux keeps terminals alive. Gossip connects agents. Agency governs terminal commands. Flashback governs context.

NEED	CLAUDE TEAMS	OUTSOURCERER	GOSSIP
Live Claude team text	Excellent	Managed workflows	Yes
Independent Claude + Codex peers	No	Controller to delegates	Yes
Observe without a peer turn	No	Claude + managed jobs	Claude + Codex
Search transcript history	No	Its fleet	Cross-harness
Queue before boot	No	Launches its jobs	Durable address
Safe JIT context	Not messaging	Not the core job	Pair with Flashback
Self + descendant commands	Not messaging	Managed job control	Pair with Agency
Routing, retries, cost	Shared tasks	Yes	Bring your orchestrator
Core license	Product feature	Noncommercial	Apache-2.0

FLASHBACK

Safe JIT context, checked facts, expiration, and lifecycle-aware admission.

GOSSIP

Address book, observation, transcript search, durable correspondence, and delivery receipts.

AGENCY

Self-management and descendant terminal commands. Authority follows custody.

RUN YOUR FIRST ROSTER.

Keep tmux. Add correspondence, context, and custody. Bring your orchestrator.
